Don't let gasoline residue ruin your engine.

Before cleaning:
Over time, even nationally known brands can leave excessive carbon deposits in the intake manifold and, especially, on the intake valves.

By law, gasoline must include detergent – an additive designed to help keep your engine's fuel injectors and intake system clean and clog-free. Unfortunately, the legal standards for detergent quality and quantity are not sufficient for today's engines.

With each tank of gasoline, harmful carbon deposits are building up on vital engine parts:

- Fuel injectors
- Intake manifold ports and valves
- Combustion chambers.

Eventually you may begin to experience lower fuel economy and engine driveability complaints like rough idling, misfiring, and loss of power and acceleration. Your "Service Engine Soon" light may also illuminate.

If you experience these symptoms, it's time to give your engine a BMW Fuel Injector and Induction System Cleaning service.

Let BMW restore and protect your investment.

After cleaning:
Your engine again achieves peak performance with greater fuel efficiency.

When you bring your BMW in for this optional service¹, professional BMW service technicians will thoroughly clean your engine's fuel system with our exclusive, BMW-approved Fuel Injector and Induction Cleaning System with TECHRON[®] technology. This service quickly helps eliminate harmful carbon deposit buildup and helps restore your BMW's original fuel economy and dynamic power and acceleration.

We recommend the following as the best way to maintain your BMW's dynamic performance and maximize your fuel efficiency:

- Use only TOP TIER Detergent Gasoline. (To learn more about brands and find the station nearest you, visit toptiergas.com.)
- When refueling, add BMW Group Fuel System Cleaner Plus with TECHRON technology every 3,000 miles. (Available at your local authorized BMW center.)

Get better performance by keeping your engine clean. Use only BMW Group Fuel Injector and Induction System Cleaner Concentrate and BMW Group Fuel System Cleaner Plus with exclusive TECHRON technology, developed and patented by Chevron.

The best way to maintain your BMW's dynamic performance – and save on the rising cost of fuel – is by keeping your engine as clean as possible.
